

## SMC1550S

- Infrared LED
- 1550 nm, 2.2 mW
- Chip: InGaAsP, 300 x 300  $\mu\text{m}$ , 1 pc.
- SMD package, 3.0 x 2.0 x 1.1
- Viewing Angle: 136°

### Description

**SMC1550S** contains one InGaAsP LED chip die mounted on a ceramic SMD package and sealed with silicone or epoxy resin. On forward bias, it emits a radiation power of typical **2.2 mW** at a peak wavelength of **1550 nm**.

### Maximum Ratings ( $T_{\text{CASE}}=25^{\circ}\text{C}$ )

Parameter	Symbol	Values		Unit

## Precautions

### Soldering:

- Do avoid overheating of the LED
- Do avoid electrostatic discharge (ESD)
- Do avoid mechanical stress, shock, and vibration
- Do only use non-corrosive flux
- Do not apply current to the LED until it has cooled down to room temperature after soldering

### Recommended soldering conditions:

Above table specifies the maximum allowed duration and temperature during soldering. It is strongly advised to perform soldering at the shortest time and lowest temperature possible.

### Cleaning:

**Cleaning with isopropyl alcohol, propanol, or ethyl alcohol is recommended**

DO NOT USE acetone, chloroform, trichloroethylene, or MKS

DO NOT USE ultrasonic cleaners

### Static Electricity:

**LEDs are sensitive to electrostatic discharge (ESD).** Precautions against ESD must be taken when handling or operating these LEDs. Surge voltage or electrostatic discharge can result in complete failure of the device.

### Radiation:

During operation these LEDs do emit light, which could be hazardous to skin and eyes, and may cause cancer. Do avoid exposure to the emitted light. Protective glasses if needed. It is further advised to attach a warning label on products/systems.

### Operation:

**Do only operate LEDs with a current source.**

Running these LEDs from a voltage source will result in complete failure of the device.

Current of a LED is an exponential function of the voltage across it. Usage of current regulated drive circuits is mandatory.
